

Triple-C Project - Capitalising Climate Change projects in Risk management for a better AA resilience

Duration:	30 Months [1st January 2019 – 30th June 2021]
LIT Project Budget:	€190,000
Total Project Budget:	€ 1671,264

Summary:

In the past, communities have mainly operated in isolation from each other when dealing with climate change and disaster management. Greater cooperation would increase the effectiveness of reducing people's vulnerability to rising insecurities and to strengthen the Atlantic Area resilience. This project responds to the urgent need to achieve this by closer collaboration with current initiatives and previous ones successfully carried out across Europe. Triple-C project is focused on the analysis, evaluation and capitalization of successful EU projects on the prevention and management of risks deriving from climate change, aiming at disseminating and transferring the best practices and results identified in this domain into policy making. The project specific objectives are: i) organize and update the results, methodologies and tools obtained from different projects in this field. ii) capitalize projects by exchange of good practices and experience among partners, as well as through identification of barriers and solutions and making recommendations. iii) assure the widest visibility and transfer of results of project products, methodologies, activities and results at European level.

The Aims and Objectives of the Triple C project are:

- Collect, organize and update the results, methodologies and tools obtained from different projects in this field.
- Identify outcomes and good practices worthy of further dissemination and exploitation.
- Capitalize projects by exchange of good practices and experience among partners, as well as through identification of barriers and solutions and making recommendations.
- Assure the widest visibility of project products, methodologies, activities and results at European level.
- Transfer results, creating a multiplier effect and/or mainstream them into policies, supporting and influencing policymaking.
- Provide next EU programmes and initiatives with guidelines and recommendations to be implemented and to support approved projects.

To do so, the project is addressed to three main target audiences: 1). European, national and regional policymaking bodies and related stakeholders. 2). Technical institutions responsible for climate change adaptation and disaster risk reduction. 3). EU cooperation programmes having climate change and risks reduction among their priorities.

LIT Activities (Development Unit):

LIT will

- Develop the methodology for assessment of relevant projects.
- Coordinate the review and assessment of relevant projects to be considered in the context of capitalisation and work with project partners to complete this review
- Complete, along with project partners, missions and visits to gain insights and knowledge from select projects
- Contribute to all relevant reports and associated outcomes from the project
- Disseminate the results and knowledge gained with relevant stakeholders and interest parties
